

The AI-written port passes its own tests. The original COBOL disagrees on every Ain commune record.

THE PORT'S OWN BUILT-PROPERTY TESTS

Tests passed.

4 of 4 • BuiltPropertyCalculatorTest

REPLAYED AGAINST THE UNMODIFIED COBOL

408 of 408

commune records of Ain differ

COMMUNE RECORD 01001 • L'ABERGEMENT-CLÉMENCIAIAT • EUROS

FIELD	COBOL	AI PORT	PORT - COBOL
Total before fees	133,364	133,364	0
3% tier: assessment fee	1,325	5,831	+4,506
3% tier: relief fee	2,651	4,771	+2,120
Fees total	4,051	10,677	+6,626
Total due	137,415	144,041	+6,626

Someone has to sign off a port an AI wrote. Its own tests are not the answer key.

THE ENGINEER	A public-sector modernization engineer, signing off the Java port meant to replace France's 2018 property-tax COBOL.
THE PORT	Published on GitHub; one commit co-authored by the Qwen-Coder agent.
ITS EVIDENCE	Its own built-property tests: 4 of 4 pass.
THE ANSWER KEY	The tax administration's COBOL, unmodified under GnuCOBOL, replayed on public 2018 commune statistics.
THE SIGN-OFF	Tare lets the commit through only when every commune record balances.

Bob's commit stayed blocked until the port balanced on every record.

1	2	3	4	5	6
Commit blocked	Weigh	Two subagents, in parallel	Fee fix, commit	First totals fix	Waste tax added
No weigh on record	408 of 408 records differ	fee fields total fields	blocked again: edited after the weigh	wrong term: 296 still differ explain, then the COBOL line	408 of 408 balance committed 9ee1c3c

Bob's first commit: no weigh on record

Edited after the weigh: refused again

After two fixes, no commune record differs, in Ain or across France.

PUBLISHED AI PORT

35,268 of 35,389
commune records differ, France

Ain: 408 of 408

REPAIRED PORT

0 of 35,389
commune records differ, France

Ain: 0 of 408

- Record differs
- Record balances

Each shape is one commune's record, replayed through the COBOL and the port. The maps draw the 35,227 communes of mainland France and Corsica; the counts include overseas communes.

A commune record is one commune's 2018 totals and voted rates from public statistics, reshaped into one calculator input. It is not a household's bill.

Another agency's COBOL, the same test: CMS's own hospice pricer is the answer key.

JAVA PORT, WEIGHED AGAINST CMS'S FY2021
COBOL

CLAIMS THAT DIFFER WHERE

CMS's own Java migration

Hospice Pricer 2.5.1

140 of 5,000

the claim total only, one cent each: it rounds after adding, the
COBOL before

AI-assisted port

its README claims functional parity

270 of 5,000

270 of 776 continuous-home-care claims; 0 of the other 4,224

The same port, three repairs

five line edits

0 of 5,000

every field equal

5,000 claims constructed from public CMS tables, seed-fixed, no person's data. For scale, Medicare's hospice payment system paid about \$28.3 billion in 2024 (MedPAC, March 2026, chapter 10).

The old program stopped the AI's commit, then graded its repair.
